

Abdulrazzaq Alhendi

Backend & Systems Engineer | Payments, Distributed Systems & Native Software

+965 9991 5770 | work@aalhendi.com | aalhendi.com | github.com/aalhendi

Experience

Software Developer - Backend - Warba Bank (Kuwait)

August 2025 - Present

- Designed and built Warba Bank's **customer onboarding service, handling 100% of new account openings** across mobile and branch channels.
- Delivered highly configurable workflows on a **custom workflow engine integrated with 5+ services**, modernising the codebase and improving observability.
- Upgraded core integration platform libraries to JDK 25, improving runtime performance, security posture and compatibility across backend microservices.

Technical Lead - Contract - Dawraty Educational Group (Kuwait)

February 2025 - February 2026

- Modernised critical infrastructure by migrating an end-of-life PHP 7 application to Rust (approximately 75k LoC), preserving feature parity and backward compatibility while enabling **3x faster response times**.
- Architected CI/CD pipelines and containerisation, reducing deployment time by **40%** and enabling zero-downtime updates.
- Reduced cloud costs through resource right-sizing, database scaling policy changes and offloading media to cost-efficient storage.

Experienced Associate, Developer - KNET (Kuwait)

October 2023 - February 2025

- Developed KNET's **WAMD ISO 20022 instant-payments platform**, implementing load balancing, mutual TLS and X.509 signatures through HSMs for security and scalability.
- Led database, garbage-collection and application-level performance work that delivered a measured **500% increase in maximum operating capacity** while maintaining 99.9% uptime.

Junior Integration Developer - Backend - Warba Bank (Kuwait)

May 2023 - October 2023

- Migrated a monolithic banking application to a Kubernetes-based **microservice architecture** while moving from JDK 8 to JDK 17.
- Implemented **distributed tracing** to investigate latency and accelerate root-cause analysis.
- Led backend work on the "Pay Me" feature revamp, including entity modelling and KNET payment-processor integration.

Senior Research Technician - Dasman Diabetes Institute (Kuwait)

July 2020 - April 2023

- Modelled large-scale patient **time-series data** from electronic health records (2011-2020) in Python and documented repeatable analysis methods.

Technical Skills

Languages	Java, Rust, C, Python, PHP, SQL
Platforms	Kubernetes, Docker, Linux, CI/CD, HSM integrations
Specialties	Distributed systems, microservices, payments, performance engineering, observability
Spoken	Arabic, English

Selected Work

CTR Native - github.com/CTR-tools/ctr-native

April 2023 - Present

- Primary contributor to a native PC port of *Crash Team Racing* (PS1), performing original **C reverse engineering and decompilation** and implementing runtime, platform, build and game-integration systems.
- Reworked PSX-specific paths into SDL3-backed Windows and Linux abstractions while preserving behaviour across a large decompiled C codebase.

Kuwait Hackathon 2024 - Award coverage

November 2024

- **Won first place** in a Capture the Flag challenge covering threat detection, system hardening, reverse engineering and digital forensics.

Loxiest

July 2023

- Built a portable interpreted language with object-oriented features, bytecode compilation, a custom **virtual machine**, REPL and script loading.

National Bank of Kuwait Hackathon - Award coverage

July 2021

- **Won first place** by designing and building a family-focused digital banking application within 48 hours.

Education

B.S. in Chemical Engineering - Iowa State University (Ames, IA)

January 2016 - December 2019

Certification

IBM AI Engineering - Credential

April 2026
